### **DETAILED ACTION**

This is a First Office Action for application no. 10/667,063 files on September 17, 2003 wherein claims 1-6 are presented for examination.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

[claims 2 and 5]

The claims state the use of  $Z_p$ ,  $Z_r$  and  $t$  which are not defined. Further the claims state  $K=RLR^t$  which is not supported by the specification (See Specs on Page 31).

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 6,628,714 to Fimoff et al.

[claims 1, 3, 4 and 6]

As shown in Figure 5, Fimoff teaches a method of downsampling a two-dimensional block of discrete cosine transform coefficients. Fimoff specifically teaches the use of 8x8 blocks as required by claims 3 and 6 (Col 1 Lines 40-41).

The method includes the steps of:

- (a) providing a two-dimensional block of DCT Coefficients (Input to 102 in Fig. 5)
- (b) applying a one-dimensional de-interlacing inverse discrete cosine transform (IDCT) with respect to a first dimension of said block (Col 10 Lines 34-38, Col 11 Lines 13-23, Col 16 Lines 32-41, Col 17 Lines 10-67, Fig. 6)
- (c) applying a one dimensional de-interlacing invers discrete cosine transform with respect to a second dimension of the results of step (b) (Col 16 Lines 8-29, Col 17 Lines 63-67, Fig 6)
- (d) downsample the results of step (c) with respect to said second dimension (Col 16 Lines 8-29). Note: Fimoff teaches the horizontal DCT domain filtering and down sampling.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fimoff.

[claims 2 and 5]

Art Unit: 2621

As best understood by the examiner with respect to the above 112 reject, Fimoff teaches the use of matrices and equations to perform the 1-D IDCT operations (Col 13 Line 26-Col 16 Line 30). It would have been obvious to one of ordinary skill in the art at the time of the invention to use an equation containing matrices as taught by Fimoff in order to perform 1-D IDCT operations.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
